Requirements for Proper Tarping of Load When Hauling Blacktop

Below is the New York State Department of Transportation specification for hauling of HMA:

'**402-3.03 Hauling Equipment.** Provide HMA transport trucks approved by the Engineer that have clean, smooth, tight metal beds with waterproof covers for transporting HMA mixtures to the work site. When a flexible cover is used, provide a cover that overlaps the vehicle's sideboards and back by a minimum of 6 inches and is fastened except for live-bottom trucks that have channelized tarp systems. The inside surface of the vehicle body may be lightly coated with a release agent listed on the Approved List for Release Agents. Do not use petroleum products or solvents as release agents. All hauling equipment is subject to approval by the Engineer.'

Expect that on all NYSDOT, airport, and Thruway jobs this spec will be strictly enforced. Any trucks not conforming are likely to be removed from the job. Thank you for your help in preventing any issues with this.

EZ Pass Requirement to work on Thruway Jobs:

For trucks that would like to work on Thruway projects: You MUST have an EZ Pass registered to your truck if you do not want to pay for the tolls while working on the Thruway. Seneca Stone is required to submit a list of trucks to the NYS Thruway Authority that will be working on the Thruway. The NYSTA needs an EZ Pass number to track the trucks in order to negate EZ Pass tolls (you will not be charged the tolls). If you do not have an EZ Pass, you can still work on the Thruway, however, NYSTA will charge you for the tolls and Seneca Stone will NOT reimburse those charges.
